

WAYFINDING SIGNAGE

AMERICAN SIGN FACTORY is a leader in the Design and Production of interior, architectural, ADA and wayfinding signage. Whether you need a new concept, a complete turnkey solution or you just need to match an existing item, we have the experience and expertise to ease you through the process. As a designer and a manufacturer, we are one of the few firms that has the capabilities to assist with both concept and budget for the entire duration of your sign program. American Sign Factory will guide you through the obstacles every step of the way, so there are no surprises.

Read below for a sampling of our capabilities:

A. This sign has a backer plate for both color contrast and to assist with the general design of depth. The face is a custom wood veneer and coloring on the backer plate was made to match the entire scheme of the building. It is durable and the look can be continued throughout the other wayfinding items in the environment.

B. This item is multi functional. It has a slider view area so a paper insert can be changed, and it has a "CLIP BAR" that can be used for daily announcements.

C. Glass gives this sign a clean and elegant visual appearance. The satin brass standoffs add to the look and help the sign float away from the wall.

D. This sign uses a wide range of manufacturing processes to achieve a very specific design goal. The backer plate is a direct print to acrylic. The directory allows the sign to become a useful changeable component.

"AMERICAN SIGN FACTORY believes that interior/wayfinding signage is important enough to have it's own professionals on staff...let a member of our team assist you with your next project"
